Taylor Bushey

Deerfield, MA | 413-768-7096 | tbushey236@gmail.com

Professional Summary

Systems and network technician with a B.S. in Computer Science and hands-on experience administering, automating, and securing Windows Servers, networks, and virtualized environments across 60+ servers, firewalls, and switches. Proficient in PowerShell automation, Group Policy baselines, and endpoint management. Seeking an infrastructure software engineering role combining systems operations with software automation.

Technical Skills

Windows Server & Desktop Administration: Active Directory, Group Policy, DFS/DFSR, MDT
Scripting & Automation: PowerShell, Bash, Python, Ansible
Virtualization: Hyper-V, VMware
Security & Tools: VLAN Segmentation, Application Control (SRP), Wireshark, Nmap
Networking: TCP/IP, DNS, DHCP, Switching, Routing

Professional Experience

Greenfield Public Schools Greenfield, MA
Network Technician II *May 2024 – Present*

- Engineered and executed a domain controller migration to Windows Server 2022, resolving DFSR replication issues utilizing custom PowerShell automation scripts.
- Designed, configured, and secured a production-ready Hyper-V virtual machine for enterprise print management infrastructure (PaperCut), managing resource allocation and hardening.
- Configured enterprise network security policies, access rules, routing rules, content filtering, and application control across SonicWall firewalls.
- Automated network configuration backups for 30+ switches using a custom PowerShell script connecting securely via SSH to a central archiving server.
- Automated remote server patch management, maintenance workflows, and endpoint updates across district infrastructure using NinjaOne and advanced PowerShell scripting.
- Designed and deployed automated desktop and server provisioning solutions via Microsoft Deployment Toolkit (MDT) for mass deployments.
- Administered Windows Server domain infrastructure, establishing Group Policy Objects (GPOs) for strict user security baselines and file shares.
- Provide daily helpdesk support to district end users, translating complex technical issues for non-technical staff, and author internal documentation and user guides for IT operations.

Lab Environment & Personal Projects

Python Automation & Networking Tools: Built custom Python utilities including a subnet scanner exporting structured results and a binary/hexadecimal file inspector (hexdump re-implementation).

Cloud & Infrastructure Lab: Automated lab provisioning with Bash and Ansible; deployed and secured Linux server environments in AWS and managed virtual machines on VMware.

Education

University of Massachusetts Amherst Amherst, MA
Bachelor of Science in Computer Science *2023*

Certifications

CompTIA Network+ | **CompTIA Security+** (Expected December 2026)
